## Michigan news in brief

COMPILED FROM REPORTS BY THE ASSOCIATED PRESS

### **LUDINGTON: Developers point out favored spot for wind farm**

Developers say they're considering a 100-square-mile area of Lake Michigan near Ludington as the site for a wind-energy farm with up to 200 turbines that could stand up to 300 feet high.

Developers Havgul Clean Energy and Sandia Wind told officials from Mason and Oceana counties this week that they still are crafting plans for a 1,000-megawatt wind farm. It would have 200 5-megawatt turbines or 100 10-megawatt turbines, or a combination of the two, placed 3.7 miles from shore.

They said it might take a decade to phase in the project, which could cost up to \$3 billion.
